

Gold Coast Airport

Environmental Vision Statement

A Green-print for the future

Gold Coast Airport in 2020 will have integrated transport links transferring passengers through to energy efficient, smart buildings.

The Airport will use 'green power', conduct onsite water collection recycling, and treatment using cutting edge technology.

Through innovative landscaping, intelligent design, smart solutions and cultural links, the airport will provide an attractive and desirable business location for employment, recreation, educational and tourism opportunities.

The Airport will promote use of new technologies and appropriate planning to minimise noise, which in turn fosters community appreciation of the airport as a valued neighbour.

The Airport will be an integral asset of the community which, through environmental leadership and adoption of best practice, achieves economic growth and job creation. The Airport enriches the lives of its neighbours, the Gold Coast and Tweed communities, its users, and its family.
